This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /trānslation="MAKKTYDLLFKLLLIGDSGVGKTCILFRFSDDAFTSTFISTIGI

Direct Submission

Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow Circle, Palo Alto, CA 94303, USA collection of human full length This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) clonins system between the Sall and HindlII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindlII site to maintain reading frame.

Clone distribution: http://bioinfo.clontech.com/orfclones.

This CDS clone is a part of a collection of human full length cypression clones generated by BD Biosciences Clontech and the Harvard Institute of Froteomics. Bach CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been the Sall and HindlII sites of the pDNR-DUAL vector. Additional sequences in the clone: "ACC' after Sall site and before Ang' to provide Kozak consensus sequence; 'GG' after last codon and before HindlII site to maintain reading frame.

Clone distribution: http://bloinfo.clontech.com/orfclones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /codon start=1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           02-AUG-2001
                                                                                                                                                                                                                                                                                  AAS27053;
                                                                                                                                                                                                                AAS27053
                                                                                                                                                                                      RESULT
                                                                                                                                                                                                                                                              à
                                                                                                                                                                                                                            The invention relates to an isolated polynucleotide (I) comprising one of administering to a mammalian subject a condition comprising administering to a mammalian subject a composition comprising manipulatering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).

(I) a useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders.

Claim 1; SEQ ID NO 88; 880pp; English.

The invention relates to novel isolated polypeptides (1), and

C polymucleotides (II). (I), (II) and the antibody to (I) are useful for

diagnosing, preventing and treating diseases including immune system

disorders (e.g. congenital and acquired immunodeficiencies, autoimmune

Cd disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ

C transplant rejections and graft versus host disease, infectious diseases

C transplant rejections and graft versus host disease, infectious diseases

CC transplant rejections and graft versus host disease, infectious diseases

CC gaucher: a disease, parkinson's disease), myeloproliferative disorders

CC disorders, primary haematopoietic disorders, hyperproliferative disorders

CC disorders, primary haematopoietic disorders, incromosomal abnormalities

CC Altheimer's disease, Parkinson's disease), chromosomal abnormalities

CC Altheimer's disease, parkinson's disease), chromosomal abnormalities

CC Altheimer's disorders, dermatological disorders (e.g. Arthythmial),

C respiratory disorders, dermatological disorders (e.g. Addison's

CC disease), reproductive system disorders, gastrointeetinal disorders

CC (inflammatory disorders), liver disorders (cirrhosis), as stimulators of

CC (inflammatory disorders) pathogens, activators of T-cells, to induce

CC higher affinity antibodies, and as a means to induce tumour proliferation

CC higher affinity antibodies, and as a means to induce tumour proliferation

CC higher affinity antibodies, and as a means to induce tumour pathologies

CC AASZ7850 represent novel signal transduction pathway protein coding

CC sequences and PCR primers of the invention

acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, which involves determining the presence or absence of amutation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition based on the presence or absence of the mutation. The polypeptide, the nucleic acid and an antibody to the polypeptide are useful for treating autoimmune disease, Parkinson's disease, allicosis, gastrointestinal disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide, the nucleic acid and the antibody are useful as immunosuppressive agents, as adjuvants to enhance immune responses, and as agents to induce higher affinity antibodies and increase serum immunoglobulin concentrations. The present sequence represents cDNA encoding a novel human protein. Note: the sequence date for this patent did not form part of the printed specification but was obtained in electronic format direct from USPTO at segdata.uspto.gov/sequence.html?DocID=20020168711.

Claim 4; Page 73-74; 82pp; English.

The invention relates to human Ras-like protein and its corresponding nucleic acid. The Ras-like protein and DNA is useful in the development of human therapeutics and diagnostic compositions. They are useful in the diagnosis, prevention and treatment of inflammation and disorders associated with cell proliferation and apoptosis, e.g. AIDS and other infectious or genetic immunodeficiencies, neurodegenerative disease e.g. Alzheinmer's disease, Parkinson's disease, wasting disease e.g. cachaxia, ischaemic injury, toxin-induced diseases such as alcohol-induced liver damage or injury, toxin-induced diseases such as alcohol-induced liver damage or cirrhosis, osteoporosis or ancer. They are also used to treat disorders associated with inflammation including allergies, atopic dermatitis, atherosclerosis, asthma, anaemia, Crohn's disease, diabetes mellitus, Grave's disease, glomerulonephritis, gout, irritable bowel syndrome, untoindumune thyroiditis, rheumatoid arthritis, sjogren's syndrome, autoimmune thyroiditis, rheumatoid arthritis, sjogren's syndrome, uveitis, trauma, or viral, bacterial, fungal, parasitic, protozoal or belminthic infections. The antibodies of the invention are useful in

pharmacogenomic analysis or for tissue typing. The transgenic animals are useful for studying the function of a Ras-like protein, and identifying and evaluating modulators of its activity. Ras-like protein is used in drug screening assays and its DNA is used in gene therapy. The present sequence is human Ras-like protein encoding cDNA

× Novel nucleic acids and peptides derived from open reading useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease.

5; Page 1978-1979; 5507pp; English.

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX compared to a sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthriti; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; cardiant; antifungal; antiheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORRX-associated disorder. The mucleic acids can be used to express ORRX proteins in gene therapy vectors. The proteins and nucleic acids may be cased to treat cancers, proliferative disorders, neurodegenerative disorders, proliferative disorders, neurodegenerative closeders cardiovascular disease, cdiabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune cartialed changes, aplastic anaemia, burns, wounds, bone and cartialed canders, aplastic anaemia, burns, wounds, bone and cartialed canders. enhance coagulation; to inhibit thrombosis; and as a contraceptive

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune

The invention relates to novel isolated polypeptides (I), and definition relates to novel isolated polypeptides (I), are useful for polynucleotides (II). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. chewatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. transplant rejections and graft versus host disease, infectious diseases (e.g. bepatitis C), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative disorders, primary haematopoietic disorders, hyperproliferative disorders (e.g. Alzheimer's disease, Parkinson's disease), chromosomal abnormalities (Down syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders (e.g. Addison's epithelial cell proliferation, endocrine disorders (e.g. Addison's chisease), reproductive system disorders (cirrhosis), as stimulators of thigher affinity antibodies, and as a means to induce tumour proliferation (in pathologies e.g. acquired immune deficiency syndrome (AIDS). AASZ6976-AASZ7850 represent novel signal transduction pathway protein coding sequences and PCR primers of the invention Claim 1; SEQ ID NO 507; 880pp; English. disorders and neuronal disorders.

The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological ample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the polypeptide is also useful for identifying a binding patrner to the polypeptide is also useful for identifying a binding patrner and determining whether the binding patrner effects an activity of the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide is useful for preventing the polypeptide or the nucleic acid encoding the polypeptide. The polypeptide or the nucleic acid condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or ausceptibility to a pathological condition or aucceptibility to the polypeptide are useful for treating auccimument disease, Parkinson's disease, silicosis, gastrointestinal concentrations, the nucleic acid and the antibody are useful as immunosuppressive agents, as adjuvants to enhance immune responses, and as agents to induce affinity antibodies and increase serum immunosuppressive agents or affinity antibodies and increase serum immunosupore afficient on a succeptibility antibodies and increase serum immunosupore processive agents or affinity antibod
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     71 ATGGCGAAGCAGTACGATGTGCTGTTCCGGCTGCTGCTGATCGGGGACTCCGGGGTGGGC 130

                                                                                                                                                                                                                                                                                           550
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell

Sequences ABB10981-ABB12310 represent 1350 novel human polypeptides, and cequences ABB10981-ABB12310 represent nucleic caids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the linvention, methods of geneting the nucleotides of antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of detecting the nucleotides or polypeptides in a sample, and methods of dentifying compounds which proplypeptides of the invention have homology to known proteins, thereby giving an linsight into their probable biological activities, and hence collypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, days various activities, stem cell growth factor activity, have various activities, stem cell growth factor activities, memunomodulatory activities; stem cell growth factor activities, memunomodulatory activities, the memostatic or the invention are useful for preventing, treating or ameliorating medical convocances, cortemorates, cortemora
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polybrucleorides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigens, and the use of polymucleorides, antibodies against human ovarian antigens, and the use of ovarian antigens, and the use of conditions include ovarian cancer and breast cancer, and disorders. Such conditions include ovarian cancer and breast cancer, and catestatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, and sorders (e.g., infertility, disorders of pregnancy, anovulation, calsorders, infertions (e.g., chlamydia, HIV, toxoplasmosis, and toxic disorders, infertions (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome, ovarian cysts, and dysmenorrhoea), endocrine ciscoportics, auctimenume cophoritis, systemic lupus erythematosus, closucers (e.g., anaemia), cardiovascular disorders (e.g., anaemia), cardiovascular disorders (c.g., anaemia) and the collection of individuals and in forensic analysis
                                                                                                                                                                                                                                                                                     useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological
                                                                                                                                                                                                                                                             Isolated nucleic acid molecules encoding novel ovarian polypeptides,

Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and immunomodulatory; muscular active general; vulnerary; gastrointestinal activity in ephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
              identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat disorders such neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AABS8549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   170

This invention describes a novel human Rablo cDNA sequence. The protein coded by said sequence belongs to Yap/Rab family and is the homolog of mouse Rablo. The present invention also relates to the polypeptide coded by said nucleotide sequence and the application and preparing process of said polynucleotide and said polypeptide. This sequence encodes the human Rablo protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CAGATATGGGATACAGCAGGCCAGGAGCGATTTCACACCATCACAACCTCCTACTACAGA 317
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  377

The protein coded by said sequence belongs to Yap/Rab family and is the homolog of mouse Rablo. The present invention also relates to the polypeptide coded by said nucleotide sequence and the application and preparing process of said polynucleotide and said polypeptide. This sequence encodes a canine Rablo protein described in the method of the invention

The protein coded by said sequence belongs to Yap/Rab family and is the homolog of mouse Rablo. The present invention also relates to the polypeptide coded by said nucleotide sequence and the application and preparing process of said polynucleotide and said polypeptide. This sequence encodes the human Rablo protein described in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                              The present sequence encodes a mammalian RAB protein. RAB proteins constitute the largest family of small GrPases, with over 40 identified isoforms. RAB proteins contain four highly conserved peptide sequences involved in GTP binding and hydrolysis. Compositions comprising RAB nucleic acid are useful for identifying homologous or related genes, in producing compositions that modulate the expression or function of RAB, for gene therapy, mapping functional regions of the protein and in studying associated physiological pathways. In addition, modulation of the gene activity in vivo is used for prophylactic and therapeutic purposes, such as treatment of cancer, and identification of cell type based on expression. The DNA may also be used to identify expression of the gene in a biological specimen
Novel isolated nucleic acid encoding a mammalian RAB protein useful for identifying homologous or related genes, in producing composition that modulates expression or function of RAB for cancer therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100 MettysTrpValSerAspValAspGluTyrAlaProGluGlyValGlnLysIleLeuIle
